

Product Data Sheet

NewPro Stainless Steel Polish

Product Description

NewPro Stainless Steel Polish is a high-viscosity system based on aliphatic hydrocarbons. It is perfectly suited for gentle stainless steel maintenance.

Application Area

NewPro Stainless Steel Polish brings back the original shine and creates a protective coating to shield the stainless steel surface from environmental influences. We recommend the NewPro MicroStainlessSteel Cloth for optimal care and shine.

Recommended for:

- Stainless steel fronts
- Many household surfaces
- Stainless steel handles and handrails
- Stainless steel sinks
- Door handles
- Various surfaces in recreational items

Product Properties

- Ready-to-use
- No medium for bacteria
- Long-term protection up to one year
- Protects against weathering / corrosion
- Reduces dirt adhesion

Instructions

We strongly recommend that a small discrete trial application be carried out to satisfy yourself as to the suitability of NewPro Stainless Steel Polish..

Subsurfaces must be grease-, oil-, and dustfree, dry and sustainable.

NewPro Stainless Steel Polish is applied with the NewPro Microfibre cloth. After a short time the product has dried on the surfaces, polish using the NewPro Stainless Steel cloth. Depending on weather conditions, the protection will last up to one year.

Delivery Form

1 litre container, milky color will become transparent after drying

Additional Information

NewPro Stainless Steel Polish does not have to be labeled. Legal protection and safety regulations for handling chemicals have to be observed. Avoid contact with mouth, eyes, and clothes. Change sprinkled or soaked clothes. Avoid splashing. Only handle out of original container. Store frost-free.

Work Hygiene

Wash hands before breaks and at work finishing. Do not eat, drink, or smoke. Avoid skin and eye contact. Wear protective clothing. For additional information see data safety sheet.
