

Product Data Sheet

NewPro Graffiti Remover Plexiglass Acrylic Glass

Description

NewPro Graffiti Remover is based on solvents and was developed for gentle removal of graffiti from acrylic glass and plexiglass.

Product can be sprayed on or applied with a cloth (NewPro Microfiber cloth). The reaction time depends on the age and thickness of the paint scribbling on the plexiglass or acrylic glass. After the product has taken effect, it should be removed from the glass surfaces instantly because the paint might infiltrate the surface more deeply and be harder to remove later on.

The aim is to let NewPro Graffiti remover react on the surface for a short while without damage to the subsurface, while at the same time removing the graffiti completely from the plexiglass.

Please apply to test area in advance to try out for reaction time on plexiglass.

Packaging size:

5 liters

Product contains solvents, therefore wear solvents-resistant gloves to prevent skin injury. Non-observance can lead to brittleness or fissures of the skin.

For further information see our product data safety sheet.
