

## **Product Data Sheet**

### **NewPro Plant Protection**

NewPro's premium and biologically degradable protective paints are specifically developed for the plant protection sector. They are suitable for trees and bushes and can be used for orchards, for the cultivation on berries and in gardens

#### **NewPro Tree Protective Paint**

Was developed for the use on young trees and bushes.

It is air permeable and protects the bark for about one vegetation period. Its ability to reflect sun rays prevents the bark being damaged by frost in early spring and the paint's natural components deter animals from eating the bark.

#### **NewPro White Concentrate**

can be applied on the young shoots on fruit trees and berry bushes to protect the young buds from damage by small animals and birds.

It is an air permeable, temporary protection for the time until the buds have reached an adequate size.

Naturally, both plant protection paints are physiologically harmless and do not contain raw materials which are dangerous for animals and plants.

Conventional mechanical sprayers are used for applying the paints which can be diluted if required.
